

THE CITY OF VAEL

INSPECTION REPORT

00 – Owner Brief

How to read this audit, and the current state of the City, without needing a software background.

PREPARED FOR

Tony Grant, Owner
TSG Construction LLC

DOCUMENT TYPE

Milestone 1 deliverable
PRD acceptance pack

PREPARED BY

Appifest – Technical Audit
Continuing the existing prototype

DATE / METHOD

25 August 2026
Read-only inspection of the live tree

1. Why this pack exists

The PRD for THE CITY OF VAEL (August 2026) says Milestone 1 must be finished and reviewed with the Owner before any development milestone begins. This pack is that milestone. It is an inspection of the building that already stands – not a rebuild, and not permission to start pouring new Rooms.

VAEL is an availability network, not a job board. A person or business veils in when they are available, or veils out when they need someone available. Matching is by percentage fit. Full profiles stay hidden until both parties accept in a Handshake Room. That is the product this City is meant to be. The success question in the PRD is simple: **does the City function as that product?** This audit answers: *parts of it do, in one district, on one device, in a prototype*. The rest is labeled on the lot, drawn on the blueprint, or not built yet.

HOW TO READ THIS PACK

Document 00 is for you. Documents 01-04 are the inspection of Framing, Foundation, Doors & Locks, and Utilities. Document 05 is the Punch List. Document 06 is the recommended finish order for Milestones 2-4. Nothing in this pack changes the product. Owner approval of Milestone 1 means “the map is accepted,” not “start building Construction tomorrow.”

2. Shared vocabulary

The PRD maps construction language onto the platform so status can be discussed without a technical background. Every document in this pack uses these terms.

CONSTRUCTION TERM	WHAT IT MEANS HERE	PLAIN EXAMPLE
Foundation	Database and core data structure	The tables that would hold accounts, VAELs, Handshakes, messages
Framing	Application architecture	How the City shell, districts, and screens are organized
Utilities	APIs, services, integrations	SMS, email, file storage, payments, live database connection
Doors & Locks	Authentication, permissions, row security	Who can sign in, who can see whose profile, who is Owner/Admin
Rooms	Features and districts	Construction Exchange, Matching Board, Community Feed
Inspections	Testing and verification	Automated tests, type checks, production build

CONSTRUCTION TERM	WHAT IT MEANS HERE	PLAIN EXAMPLE
Punch List	Defects and incomplete work	Numbered gaps that still need closing
Change Orders	Approved changes to scope or architecture	Payments, a new district, or a stack migration

3. The three truths to take from this inspection

TRUTH 1 – THE CITY RUNS IN THE BROWSER TODAY

Every account, listing, Handshake, and message lives in that visitor's own browser storage. Two phones do not share a City. There is no live Foundation connected to the running app. A full database blueprint exists as drawings (SQL migrations 0001-0020) and has never been the thing the product actually stands on at runtime.

TRUTH 2 – ONLY ONE DISTRICT IS A REAL ROOM

Media & Technology is **LIVE**. Contractor (the closest thing to Construction) and Trucking are **COMING SOON** placeholders: a landing page and a local interest form, zero listings, zero matching, zero Handshake. Residential and Commercial, as named in the PRD, are not districts in the registry at all. Real Estate is **EARLY ACCESS** – also not a working Room.

TRUTH 3 – CONTINUE, DON'T REBUILD, IS THE RIGHT CALL

The prototype is real. Veil in/out, 24-hour visibility, percentage matching, Handshake, profiles, documents, community, and city-wide navigation all exist and work for Media & Technology on a single device. The Framing is coherent. The Foundation drawings are serious. The job is to stabilize that, then add the PRD Rooms on the same pattern – not to start over.

4. What is standing vs what is labeled on the lot

PRD ROOM	STATUS IN THIS INSPECTION	WHAT A USER ACTUALLY GETS
Profiles	Partial – standing in Media & Technology	Resume-like profile, portfolio links, documents tab (license, insurance, capability statement, etc.). Not a fully verified identity system. Anonymous visitors can still see profile details in the prototype; the Foundation drawing would hide district details from unsigned visitors.
Veil In / Veil Out	Standing in Media & Technology	24-hour default visibility is enforced on new listings. Re-veil exists. Extended plans exist as a labeled demo – not purchasable.

PRD ROOM	STATUS IN THIS INSPECTION	WHAT A USER ACTUALLY GETS
Matching Board	Standing in Media & Technology only	Live board ranked by percentage fit. Scoring weights are built for media/tech fields (discipline, tools, certifications). Not a generic engine for Construction or Trucking.
Handshake Room	Standing in Media & Technology	Mutual accept before the private room. Board-match and profile-handshake both exist. The newer "service layer" built for a future live Foundation is not what the screens actually call.
Construction Exchange	Not built	Registry name is <i>Contractor</i> , coming soon. Placeholder only.
Trucking Exchange	Not built	Coming soon. Placeholder only.
Residential flow	Not built	No homeowner/civilian Room. Closest registry entry is Real Estate (early access), which is also a placeholder.
Commercial flow	Not built	No business/civilian Room as specified in the PRD.
Communities + Community Feed	Standing (city + Media & Technology)	City homepage feed and district community both work. This is one of the more complete Rooms.
Subscription gating (structural only)	Demo hooks only	Extended VAEL pages exist as a local demo. No Stripe, no billing, no premium homeowner-lead gating. Matches the PRD: do not finalize monetization yet.

5. How the other six documents map to the PRD

FILE	PRD DELIVERABLE	TERM	READ IF YOU WANT...
01 Framing	Repository and architecture review	Framing	How the City shell and the one live district are framed
02 Foundation	Data model and Supabase review	Foundation	The blueprint vs what actually holds water today
03 Doors & Locks	Auth and RLS review	Doors & Locks	Who can enter, and what the locks would do if the Foundation were poured
04 Utilities	APIs and integrations review	Utilities	What is not connected: SMS, email, storage, payments, hosting
05 Punch List	Bug and gap assessment	Punch List	The numbered list of remaining work
06 Blueprint	Owner-readable prioritized finish list	Blueprint	Recommended order for Milestones 2-4

6. What this inspection did and did not do

Did

Read the live application tree, the district registry, the Foundation drawings (migrations 0001-0020), auth and permission design, and the existing engineer notes in `docs/audit/`. Re-checked those notes against the current files. Recorded PRD-vs-repo disagreements as findings instead of smoothing them over.

Did not

Change product code. Connect a live database. Build Construction or Trucking. Prove row-security against a running server (none is attached to the app). Sign off Milestones 2-4. This copy of the workspace also had no git history and no successful dependency install during the audit window – Inspections cite the project's own documented baseline rather than a fresh test run.

7. Open items that only the Owner can close

These are already listed in the PRD. They remain Owner decisions. Engineering should not invent an answer.

1. **Monetization.** Advertising, premium visibility, homeowner-lead gating, pricing. Structural hooks only until you say otherwise.
2. **District order beyond the PRD list.** The live registry also shows Nursing/Healthcare, Equipment, Government, Real Estate, Legal & Finance. Building any of those is a Change Order unless you add them to scope.
3. **Naming.** The PRD says Construction Exchange. The City currently labels that lot *Contractor*. Residential/Commercial are not lots on the map. You should confirm the names before Milestone 2 frames those Rooms.
4. **Anonymous profile visibility.** Prototype screens show profile details to visitors who are not signed in. The Foundation drawing would hide district profile details from those visitors. That is a product door, not a coding preference.
5. **Communications cadence.** PRD proposal: Slack, updates every day or two, milestone demos. Still to confirm.

8. Recommended Owner reading order

1. This brief (you are here).
2. Document 05 Punch List – skim the “Blocks the product / Blocks a PRD Room” items.
3. Document 06 Blueprint – the recommended finish order.
4. Documents 01-04 as needed when a Punch List item cites them.

BOTTOM LINE

THE CITY OF VAEL is a real, working prototype of the product in the PRD – for one district, on one device, with honest labels on every unfinished lot. Milestone 1 is complete when you have reviewed this pack. Milestone 2 should not start until you approve that next scope in writing.

THE CITY OF VAEL · Milestone 1 Technical Audit · 00 Owner Brief. Construction vocabulary: Foundation = database, Framing = application architecture, Utilities = APIs and integrations, Doors & Locks = auth and RLS, Rooms = features and districts, Inspections = testing, Punch List = defects and gaps, Change Orders = approved scope changes. This document does not authorize development, connection of a live backend, or any Change Order.
